Features & benefits

- For air supply and air extract
- For installation in ceilings and walls
- For semi-circular ductwork AE35SC (50 x 102 mm)
- Easy to shorten to the desired application dimension
- Anti-static and anti-bacterial properties
- Part of the TÜV SÜD certified Air Excellent system

The valve adapter is developed for installations in ceilings and walls. It is manufactured in a way that it can cross most common heights and thicknesses such as walls and the space behind suspended ceilings. The adapter can be cut to length with normal tools for further assembling with the end-piece of the ventilation system; the supply valve or extract valve. The adapter has two Air Excellent ductwork connections. The valve adapter is delivered with a dust-cap at the 125 mm end. From the two Air Excellent ductwork connections, one is delivered with a detachable closing cap.
